Application No. 10/802,781

In the claims:

1. (currently amended) A detonator protector comprising:
a housing fitted with an end cap at one end thereof and a plug at another end thereof;
and
~~at least two chambers disposed in said housing, one chamber being of sufficient size to receive a detonator therein, that chamber being disposed inside an the other of said chambers, at least two of said chambers being formed with a plurality of holes along a longitudinal length thereof, wherein said end cap and said plug are each formed with at least one aperture for releasing a fluid therethrough.~~
2. (cancelled)
3. (original) The detonator protector according to claim 1, wherein said chambers are generally concentric with another.
4. (original) The detonator protector according to claim 1, wherein said chambers are generally concentric with said housing.
5. (original) The detonator protector according to claim 1, wherein said chambers are secured to said end cap.
6. (original) The detonator protector according to claim 1, wherein the holes of at least one of said chambers are spaced generally equidistantly from one another about the perimeter of said chamber.
7. (original) The detonator protector according to claim 1, wherein the holes of at least one of said chambers are symmetrically spaced from one another.
8. (original) The detonator protector according to claim 1, wherein said chambers are arranged relative to one another so that the holes of one of said chambers are spaced angularly from the holes of another of said chambers.
9. (original) The detonator protector according to claim 8, wherein the holes of one of said chambers are spaced perpendicularly from the holes of another of said chambers.
10. (original) The detonator protector according to claim 1, wherein said detonator protector is at least partially covered with a protective coating.
11. (original) The detonator protector according to claim 10, wherein said protective coating is electrically insulating.
12. (original) The detonator protector according to claim 1, further comprising a handle attached thereto.
